

## Look at Me. I am Well.

"I cannot say how much Dr. Farnum has already cured me of near trouble. My eyes lids were swollen and red nearly all the time. My eyes were especially sensitive to light. Church was my trouble. I had had my eyes treated and took a great deal of medicine, but nothing seemed to help me until I visited Peru. I always use Peru when my family need it. Always find it very good; it helps wonderfully. You can use my testimonial anywhere you wish." So says Mrs. C. Stevan, No. 14 S. Leavitt St., Chicago, Ill.

## FARM COLUMN

### NOTICE TO FARMERS

There is a prospect that there will be trouble with chinch bugs after the wheat and oats are harvested, and in order to save the corn that is close to wheat and oats, a strip of sorghum should be sown two or three rods wide, next to wheat or oats. It can be broadcasted in the corn and covered with the cultivator as you cultivate the corn. And in case the bugs do no damage the sorghum will make good feed and will not hurt the corn much under favorable weather conditions. It pays to play safe and I advise you to sow the sorghum right away.

L. H. Fash, Agr.

### THE DISK HARROW

It nearly always pays to prepare land before plowing.

The disk harrow is the best tool for this preparation.

It mixes the stalks, stubble, and other vegetable matter with the surface soil.

It prevents the soil from drying out before the plowing can be done, and may be a great protection against drought.

It cuts up and mixes with the furrow slice the green manure crop, if one is being turned down.

It makes the furrow slice turn over more smoothly, decreases the number of clods, and benefits the seed bed.

By making the land moister and breaking the top of the ground, it makes the plowing easier, and causes the plow to pulverize the soil more thoroughly.

If every stubble field which is to be fall harrowed were disked at once after removing the corn or small grain, the yield of grain over the whole nation would be greatly increased.—Farm and Fireside.

### HIGH LIGHTS IN LIVE STOCK

Government statistics are interesting in volume, but highly interesting just the same. For instance:

On January 1, 1915, people were five times as numerous in the United States as horses, and horses were five times as numerous as mules. Texas had over twice as many mules (772,000) as Missouri, its closest competitor. Texas also led in cattle (5,121,000), having nearly twice as many as Iowa. Iowa had twice as many swine (8,720,000) as Illinois, its closest competitor.

Montana and Wyoming are the two greatest sheep states, each having about 1,450,000 head. New Mexico and Ohio come next with about 900,000 apiece.

Rhode Island has 25,000 milch cows, and Nevada 24,000. Wisconsin has the most—1,626,000.

### FRISCO DEMONSTRATION FARM

The Editor of the Farm Column accompanied Frisco Demonstrator Elrod to the Frisco Demonstration Farm south of town on the Calera road Tuesday morning and there got an idea of the work being done. The place is owned by S. H. Smith and is farmed by J. E. Brown. Mr. Brown is planting 15 acres of cowpeas and corn in alternate rows, fifty acres of peanuts, twenty of which will be hogged down and thirty of which will be harvested, one acre of Sudan grass and five acres of teffaria. The crops mentioned are being planted and cared for according to the direction of Mr. Elrod and all will fair to make exceptionally good yields this year. Mr. Brown is also hypotetically accurate data upon the results, his milkings and his care for his hogs, with a view to improving his herds and pens. The Frisco has about forty of these demonstration farms along its lines, and is showing what can be done with careful cultivation and thorough seed selection.

### COUNTY ADVISERS BY LAW

For the past two or three years, some of the most progressive counties in the different states have been employing county advisers, whose business it is to advise with farmers on anything that concerns their farming and feeding operations. The pay they have been getting usually runs from \$1,500 to \$4,000 a year and expenses, the term of employment being three to five years. So far as we have learned this has proved entirely satisfactory; and he is a poor adviser who does not save to the farmers of the county anywhere from five to fifty times his cost to the county.

Satisfying goodness that keeps right on satisfying explains why smokers call for FATIMA day after day. They have declared their preference to any other 15c cigarette by the overwhelming score of
